

CETACEANS

Learn all about the different types of cetaceans and the interesting adaptations they've developed. We will also discuss their ecological and cultural significance, and how human activities can negatively impact these marine creatures.

In this program, students will:

- Identify several different types of cetaceans
- Discuss some of the adaptations they have developed, such as echolocation
- Look at the migration patterns of different species
- Understand the ways that humans impact different types of cetaceans, and how this can be problematic

Target Age:
6-11

Format:
In-person OR
Online

Duration:
45min

Big Ideas

Science 2:

Living things have life cycles adapted to their environment.

Science 3:

Living things are diverse, can be grouped, and interact in their ecosystems

Science 6:

Organisms rely on internal systems to survive, reproduce, and interact with their environment.

Core Competencies

- Determining common purposes

- Analyzing and critiquing

- Contributing to community and caring for the environment

Curricular Competencies

Science

- Demonstrate curiosity about the natural world
- Make observations about living and non-living things found in the local environment
- Identify patterns and connections in data

Social Studies

- Ask questions, make inferences, and draw conclusions about the content and features of different types of sources
- Differentiate between intended and unintended consequences of events, decisions, or developments, and speculate about alternative outcomes
