1. Public Access to Crown Land and Resources:
To the extent possible, beyond established rights and necessary conservation restrictions, we support protecting public access to Crown land for sustainable hunting, fishing, camping, and outdoor recreation. Decisions should be guided by science and responsible resource management.

2. Fish, Wildlife, and Habitat Management Funding:
We support science-based fish and wildlife management rather than ideologically driven policies. Effective management must protect fish and wildlife populations, support habitat conservation, and recognize the importance of both subsistence and recreational hunting. Funding decisions should reflect these priorities.

3. Prescribed Burns and Wildfire Management:
British Columbia already regulates prescribed burns under the Wildfire Act and Wildfire Regulation. The priority should be enforcing existing laws against arson and implementing a science-based approach to prescribed burning. A fixed annual burn target is not necessarily appropriate; decisions should be guided by sound science and practical wildfire management, not political pressure or ideologically driven environmental activism.

4. Federal Firearms Confiscation and Buyback:
We oppose diverting provincial resources from public safety to administer the federal firearms buyback program. The province cannot override federal law or direct RCMP operations, but we can decline provincial administrative participation and restrict certain uses of provincially controlled resources.

Thank you.

Sincerely,
OneBC Team
